

## PRESS RELEASE

### **Gamma Research Investing in Revolutionary Software Technologies**

**Oranjestad, June 5, 2009** – Gamma Research Inc. and the American company “EPS Software Corporation” started a strategic alliance for close cooperation in future software development projects by Gamma Research. Based upon the latest version of the Microsoft .NET software development platform Gamma Research will develop together with EPS a new framework for all their applications.

Gamma Research Inc. is the most well known software developing company in Aruba and the Netherlands Antilles. Among others they are known for the recently, in Aruba, successfully implemented Border Control Management System (named RADEX/RPS). Gamma Research has already developed many sophisticated business software solutions and they developed the most used salary administration software package “Payroll Pro” for the Netherlands Antilles and Aruba, currently used by over 3000 companies.

EPS Software Corporation is a Houston based company with International branches that is working for Fortune 500 companies in the USA and consulting major software companies and IT departments of client organizations. As a talented team of elite developers worldwide, EPS developers and project leaders have unparalleled industry qualifications including four Microsoft Excellence Award nominations and eighteen Microsoft MVP (Most Valued Professional) awards.

They have published eight books and written countless magazine articles for many trade and developer magazines, including their own well known international programmer’s magazine (“CoDe”).

During the last few years Gamma Research has been attracting new programming talents in Aruba to expand its team of professionals and has adapted the most modern and advanced programming technologies and techniques.

Subsequently senior developers of Gamma Research have visited the offices of EPS in Houston and have been involved in courses and trainings.

At this moment two of world’s best software developers and business strategy managers, Claudio Lassala (Senior Developer at EPS Software Corp) and Patrick Lashford (Director of Business Development at EPS Software Corp) are in Aruba to further talk and discuss the cooperation between the two companies.

As a result, all products of Gamma Research will be based upon the latest technologies available, such as the new Microsoft .NET framework, the C# programming language in combination with Microsoft Visual Studio, Windows Presentation Foundation and database back-ends such as Microsoft SQL, MySQL or Oracle. This will open the road to

develop software applications such as Web enabled solutions, software for mobile phones, Pocket PC's and programs with high graphic content and functionality.

Using these technologies and working together with EPS, Gamma Research will continue to provide its customers with the best and most modern software solutions.
